PAST PERFORMANCE

Business Support Services

State of Georgia's State Road and Tollway Authority

Our team conducted a comprehensive review of transportation-related bills. Based on the analysis, our team developed an effective outreach strategy to advance the agency's interests and secure favorable voting outcomes. **Our collective efforts helped pass the HB930 bill - which established regional transportation governance and funding in Metro Atlanta.**

Business Support Services

City of Atlanta's Hartsfield-Jackson International Airport

Conducted a feasibility study on the potential for a truck stop on the airport's foreign trade zone property. Through extensive research and interviews with hundreds of truck drivers, we gathered valuable insights and feedback on the development of a new truck stop. **As part of the study, we identified ways to enhance the truck stop's revenue-generating potential by incorporating a gas station component.**

IT Business Support Services

Porsche

Virtually trained Porsche dealership owners on Porsche's augmented reality software Tech Live Look. **Via feedback and data analytics collected, we found that dealerships were not equipped to fully leverage software due to their outdated IT infrastructure.** We reported our findings to stakeholders and the decision was made to update all dealerships' infrastructure.

Project Management

AT&T

Led a cross-functional team tasked with identifying areas where AT&T's products and services were not meeting customer needs. Through data analytics and collaboration with stakeholders, we pinpointed pain points and developed a comprehensive plan to address them.

Acquisition Support Services

City of Smyrna

Our acquisition support services involve leading targeted outreach strategies to engage vendors in the bidding process for Transit Studies and Economic Development Feasible Studies Request for Proposals (RFPs). We assisted in drafting RFPs aligned with internal client requirements and **developed a comprehensive scoring matrix to objectively evaluate vendor proposals and identify the most suitable suppliers for each project.**
